Industrial Partnership

The prestigious manufacturer of ferrites Ferroxcube and Frenetic have signed an agreement of partnership. Both company's customers will benefit of this agreement.

Very accurate data from Ferroxcube's materials are included in the Frenetic platform, theoretical and real measurements, what provides very high fidelities in the designs provided by Frenetic. By the side of Frenetic customers, they will have access to latest material developed by Ferroxcube, faster sample building and faster access to mass production.

Frenetic technology grows with each design and data. Designs with Ferroxcube materials will be improved in the whole power range

Frenetic is a web platform for designing and prototyping magnetic components. Theoretical calculations and real measurement are processed by artificial intelligence providing an optimized design which is built, tested and sent to the user in a few days.
