

Our worldwide support...

...your reassurance of efficient stock management

We are part of a global organisation, with sales offices and distributors in most countries. Our highly trained personnel provide you with technical and logistics support, backed up with on-line order processing to guarantee the shortest possible lead times (less than four weeks). The stock is centrally managed in Eindhoven (The Netherlands), at the heart of our proven logistics network.

Our production capacity...

...your guarantee of a successful partnership

It is necessary to maintain close links between design and production, so most of our products are made in factories not far from our headquarters. High-end products are made in Europe, while more cost-sensitive types are produced in the Asia Pacific region. Some manufacturing is sub-contracted to trusted 'partners' who satisfy our tough quality criteria.

Our commitment to quality...

...your path to customer satisfaction

Our quality philosophy is reflected in everything that we do, from creating new products to delivering them to you on time. Naturally, our processes are certified ISO 9001. Our structural approach to project management involves all parties in the quality chain, from raw material suppliers to you, our end customers. The results are defect-free products and services, and the lowest possible integral costs.

Bobbins & Accessories

Winding and assembling your perfect component

Our bobbins...

...your basis for perfect windings

The components you use can affect the quality of your products. Every individual part of an assembly may influence the reliability or performance, so choosing the best is not just important, it's essential – particularly with critical wound components. The cores, bobbin and windings depend on the integrity of each other to operate as an effective functional component.

clean and easy way of assembling the individual parts to a functional component. The materials and surface treatments used in our clips are carefully selected and ensure an even clamping force over the lifetime of the component. As well as providing industry-standard clipping solutions, we have a range of specific clips, where the function of a multiple part clip has been replaced by a single clip. So, providing you with the best assembly-friendly and cost-effective solution where possible.

FERROXCUBE makes ferrite cores to meet exacting requirements. And to ensure a perfect winding every time, the Bobbins & Accessories Group manufactures and supplies precision bobbins and support products. The bobbins are designed for perfect windings and zero-defect mounting on and in printed circuit boards. The materials and surface treatments we use withstand the insertion forces and high temperatures of assembly and soldering. We have a full range of multifunctional bobbins and accessories for surface-mount and through-hole wound components.

Our clips...

...your basis for easy assembly

In addition to our bobbins, we have an extensive range of mounting clips. Our clips, both for through-hole and surface-mount wound components, provide a

Our design expertise...

...your key to a total solution

Our standard product ranges cover most applications, but we can also design a part to meet your specific requirements. Our engineers have unparalleled experience in designing and engineering products in record time, drawing on the extensive production technology and materials engineering expertise available within Ferroxcube.

Utilizing the latest full 3D CAD system we are ensuring the shortest possible time to market.

E (EF)	EFD	ETD	EP	ER	RM	P + PQ	Toroid	Special Products
Pin Through-Hole (PTH) 13, 16, 20, 30, 32, 42, 55, 65 Clips and Clamps available for most products 	PTH 15, 20, 25, 30 15 and 20 L-pin, low build-up height 	PTH 29, 34, 39, 44, 49, 54, 59 Complete range, in-moulded pins. Clips available 	PTH 7, 10, 13, 17, 20 All phenolic parts, both single Clips and Clamps/Springs available 		PTH 4, 5, 6, 7, 8, 10, 12, 14 Clips available, both in-moulded and post-inserted pin versions 	PTH 11, 14, 18, 22, 26, 30, 36, 42 Multi-section, complete range of products, such as: Bobbins, Tagplates, Springs, Containers. High stability version as assembled product 		Triple Insulated Wire (TIW) E16, 20 High insulating and coupling factor Robust design in phenolic material 
Surface-Mount Device (SMD) 5.3, 6.3, 8.8, 13, 16 Multi-section, Caps and Clips available 	SMD 10, 12, 15, 20 One piece pick and place metal Covers/Clamps, C-pin design 		SMD 7, 10, 13 Single Clips, C-pins phenolic version 	SMD 9.5, 11, 14.5 Gullwing pin types in high performance thermoplastic. Clamps available 	SMD 4, 5, 6 Both phenolic and thermoplastic types, multi-section, low profile Clips available 		SMD 9 Cover and Tagplate, C-pin version 	SMD FRM9, 11.5 C-pin version in high performance thermoplastic material 
Coaxial 16, 20 High insulation two pieces male/female bobbins 		Coaxial 34 Two pieces male/female high insulation factor in-moulded pins 			Dual In Line (DIL) 4, 5, 6, 8, 10, 14 In-moulded L-pin version for easy winding 	DIL PQ20, 26, 32, 35 L-pin post-inserted versions in high-performance thermoplastic material 		Planar E14, 18, 22 Range of Clamps available 

Our technological competence...

...your access to quality products

We have developed and refined different production processes to enable us to make bobbins with their own specific characteristics and properties. There are two printed circuit board mounting technologies (through-hole and surface-mount), and for each we have two separate production techniques.

Pin through-hole technology (mounted in the PCB)

> In-moulded pins – specially shaped pins are inserted in the mould prior to injection, so that when the material flows around them, 100 per cent fixation is guaranteed. This in turn, ensures excellent positioning and fixation in the PCB. The pins have a square-shaped base to prevent the wire slipping during wrap-ping.

> Post-inserted pins – a two-step production process involving the insertion of the pins after the plastic part has been moulded. Depending on the application, round- or square-section wires are used

for the pins. This is the more cost-effective through-hole bobbin manufacturing technique.

Surface-Mount Device technology (mounted on the PCB)

- > Gullwing-shaped pins – another 'in-moulding' process similar to that described above but employing a leadframe. Once the moulding has taken place, the redundant leadframe metal is cut off, leaving the gullwing pins protruding from the bobbin.
- > C-shaped pins – a 'C-shaped' pin makes the bobbin easier to wind, so our SMD bobbins are usually made this way. C-pins are also thicker and wider than most gullwing pins, and therefore stronger.

Design innovation

Metal pick-and-place caps for SMD bobbins, for example, combine both the fixing and pick-and-place functions in a single clamp. This reduces the total number of parts from three to one. The C-shaped pin construction has mechanical advantages too, as it separates the wire termination function from electrical connection, and so ensuring excellent coplanarity.

Our choice of materials...

...your assurance of conformity

When selecting materials for our products, the design, production process, electrical- and mechanical requirements are important factors. But above all, we aim for optimum performance at an acceptable price. Many materials are used, ranging from industry-standard polyamide (PA) to the more exotic liquid crystal polymers (LCP) and thermosetting phenolic materials (PF).

Meeting today's standards

- > Underwriter Laboratories (UL) compliance – all polymeric materials used in our bobbins and accessories are tested and in full compliance with UL;
- > Environmental acceptance – as part of our ISO 14001 certification, all materials are screened and shown to be free from banned substances according to agreed Ferroxcube standards.

Matching materials to special requirements

- > Smaller surface-mount bobbins – are made from high-performance thermoplastic LCP;
- > Larger bobbins – are made from thermosetting materials because thick winding wires require extra mechanical stability at high soldering temperatures;
- > Square section pins – help reduce the number of wrappings needed to secure copper wires to the pins.
